# MAGIC OF COLORS

By It We Know of What the Sun and Stars Are Composed.

The miracle of the spectroscope is repeated before our eyes every day and every night without our recognizing it. If people were more observant and more accustomed to think about the meaning of what they see great dis-

coveries would be as plentiful as diamonds in a Kimberley pipe. A man said to me the other day, "What is all this color that I see when I squint my eyes and look at an electrie light?"

Russia. European crop advices are I replied: "It is the greatest revgenerally favorable. At the close the elation that man has ever bad in the market was as following the plate spot physical world-it is spectrum analysis. Your crowded evelashes become an astronomical instrument and analyze the light for you into its primary Illinois-Unsettled tonight and Sun- colors. The multitude of narrow slits day; probably occasional showers; through which the light passes as you squint your eyes act like a diffraction grating and change the direction of the various waves of light in accordance H. E. CASTEEL, President. M. S. HEAGY, Vice Pres. H. B. Simmon, Cast with their length.

"The red waves are long, one thirnine-thousandth of an inch in length. and they keep on without much change of direction, but the violet waves are short, one fifty seven-thousandth of an inch in length, and they are considerably terned out of a straight line. All the intermediate waves, from orange, through yellow, green, blue and indigo, decrease in length and are more and more turned aside as they get shorter. The consequence is that you see through your nearly closed eyelashes a band of colors, which is nothing but the famous spectrum of the astronomers."

By the discovery of that spectrum and the reasoning that it led to we to itself. Spectroscopic instruments The Argentine wheat crop has been more perfect than the eyelashes reveal carbon, calcium, sodium and many United States net wheat surplus on other substances which glow in the
